

## Participants needed!

We are interested in looking at the effects of consumption of study nutritional formulations on heart and gut health.

### Are you eligible?

Men and women between the ages of 30-75 years on omnivorous diet (regular consumption of eggs, red meat, dairy) with marginally elevated TMAO levels ( $\geq 9.9$   $\mu\text{M}$ ).

The research study pays up to \$1,050.

- One screening visit (30 minutes)
  - Screening questionnaire
  - Blood draw for determining serum TMAO levels
- If eligible, then three clinic visits over the course of 8 weeks (45 minutes – 1 hour)
  - Baseline: wellness assessment, blood draw, compensation/food allowance, supplies
  - 4 weeks: wellness assessment, blood draw, compensation/food allowance, supplies
  - 8 weeks: wellness assessment, blood draw, final payment processing
- Online questionnaires (30 minutes), at home stool collection kit (free shipping)
